PROJECT REPORT

CSE0001 – Digital Literacy

Name	SHREYA BAGHEL
Registration No.	25BAI11008
Branch	Computer Science & Engineering (AI & ML)
Year	First Year B.Tech (2025–2026)
Course Code	CSE0001
Course Title	Digital Literacy
Credits	1 Credit | Pass / Fail (Non-CGPA)
Institution	VIT Bhopal University
Submission Date	[27/03/2026]
GitHub Repository	https://github.com/shreyabaghel06/digital-literacy-project

Introduction

This report details the work I did for VIT Bhopal University's CSE0001 Digital Literacy project. I assumed the role of a Student Digital Ambassador for this assignment, which is a peer mentor tasked with assisting other students in using the digital world in an efficient, secure, and professional manner.

Creating a digital literacy infographic, developing a professional online portfolio, investigating coding and collaboration platforms, practicing professional email communication, and investigating cybercrime awareness are the five components of the project, each of which corresponds to a single course module. The organization of all deliverables into a single GitHub repository is an example of practical digital literacy. All the tools are browser-based, free, and don't require any prior coding knowledge.

Task 1 Write-up – Digital Literacy Awareness Infographic

What I Made & Tool Used

For Task 1, I designed a one-page Digital Literacy Awareness Infographic using Canva, a free browser-based graphic design platform. The infographic was created to help my batchmates understand core concepts of digital literacy in a visually engaging, easy-to-read format. I selected a clean two-column layout with colour-coded sections, simple icons, and short text blocks to ensure clarity at a glance.

The infographic covers three topics:

(1) What Digital Literacy Is — a student-friendly definition emphasising effective, responsible, and critical use of technology;

(2) Useful Digital Tools For Students --Google Docs assignments, Canva – presentations, GitHub – projects, Zoom – communication.

(3) Safe Internet Practices — habits such as using strong unique passwords, enabling two-factor authentication, and avoiding suspicious links.

Reflection

It was really difficult for me to distil a wide subject into one page. I learned to put the needs of the audience before completeness because every revision forced me to cut out details that I thought were crucial. The most intriguing finding was the extent to which visual design influences comprehension—a well-placed icon conveys information more quickly than a paragraph. The process was made simple by Canva's template library, and I now see why visual communication is a unique and important ability in professional settings.

Task 2 Write-up – Student Digital Portfolio

Platforms Set Up & Their Purpose

I created and configured professional profiles on three platforms. GitHub (github.com) is a cloud platform for hosting code using Git version control; I created a profile README repository displaying my name, branch, year, and a goal. LinkedIn (linkedin.com) is a global professional networking platform; I completed my Education section with my degree, institution, and expected graduation year — establishing a digital resume visible to recruiters and internship coordinators. Kaggle (kaggle.com) is Google's data science and machine learning community, offering datasets, competitions, and guided courses; creating an account now ensures I have a presence in this growing field from the start of my degree.

Future Plans

In the next four years, I am going to have GitHub platform hosting major academic projects, which will help me exhibit my technical skills development publically to future employers. Very soon, my LinkedIn account will be reflecting my new internship experiences, certifications, and achievements, as well as growing my network of alumni and industry people in my field of interest. As I delve into more courses on data structures, machine learning, and analytics, Kaggle platform is the one that I will be using increasingly. These three platforms collectively will be the foundation of my solid, factually supported professional identity by the time I receive my degree.

Task 3 Write-up – Coding & Collaboration Platforms

Platforms Used & What I Practised

For Part A, I decided to set up a HackerRank (hackerrank.com) account and solve the easily accessible problem, 'Solve Me First', located in the Problem Solving section of the website. This problem involves the implementation of two input variable which returns the sum of two variables, difference of two variables. My submitted solution was successful as it passed all the given test cases. Even by solving such a straightforward problem, I was exposed to various aspects of a competitive programming platform, such as problems presentation, automatic checking of solutions by test cases, and the rewarding system based on badges and scores.

What I Built – Google Form Quiz

For Part B, I built a five-question Digital Literacy Awareness Quiz using Google Forms (forms.google.com), linked to a Google Sheet for automatic response collection. The quiz includes four multiple-choice questions (covering the definition of digital literacy, safe internet habits, platform selection, and phishing awareness) and one short-answer question asking students to share a personal online safety tip. The form link is shared in my GitHub README.md. Building this taught me how Google Workspace tools integrate seamlessly — the form, sheet, and sharing controls all work within a single ecosystem — making them powerful tools for academic surveys, feedback collection, and collaborative data gathering.

Task 4 Write-up – Professional Email & Etiquette Guide

Communication Scenario

A prominent case where poor digital communication resulted in harm is the real-life scenario of workers and students being fired due to sharing unprofessional content on social networks. For instance, there have been some cases in India where people posted grievances or improper views about the organization they work for or the school, they attend on social media sites such as Twitter and Instagram. They did not expect that their posts would go so viral and reach a large crowd. What seemed to be offhand comments ended up being noticed by the teaching staff and HR departments, leading to the students getting punished academically and the employees losing their jobs.

Key Learnings

This assignment has reminded me that professional communication is a habit rather than a skill alone. Structuring emails is very important. A main subject should be indicated clearly and a proper greeting, body, and sign-off should be provided, communicating both respect and competence. For social media, it is really very simple refrain from posting any content that you would not be comfortable with a professor or employer reading. Each and every one of our digital communications, regardless of whether they are formal or informal, make up our permanent online reputation. I plan on using these principles faithfully on all my accounts in the future.

Task 5 Write-up – Cybercrime Awareness Case Study & Prevention Guide

What Surprised Me

This assignment has reminded me that professional communication is a habit rather than a skill alone. Structuring emails is very important. A main subject should be indicated clearly and a proper greeting, body, and sign-off should be provided, communicating both respect and competence. For social media, it is really very simple refrain from posting any content that you would not be comfortable with a professor or employer reading. Each and every one of our digital communications, regardless of whether they are formal or informal, make up our permanent online reputation. I plan on using these principles faithfully on all my accounts in the future.

One Habit I Will Change

I will never enter my UPI PIN, share an OTP, or act on any financial instruction received over a phone call or message without independently verifying the caller's identity through the bank's official number. I also plan to explain this specific distinction to family members who are newer to digital payments.

Conclusion

I gained valuable operational knowledge of five facets of digital competency that mere textbooks could never demonstrate: Visual communication; developing an online portfolio for professional purposes; applying programming and collaborative software; understanding how to craft written correspondence; and knowing how to identify potential dangers on the Internet. The largest collective intellectual realisation was that developing digital competency is an accumulation of rich habits of being considerate, behaving professionally, and being inquisitive, rather than an individual ability. My GitHub repository includes all my project outputs and will continue to expand henceforth as it develops into a living history of my academic accomplishments.
